Purpose

We at [Fair Share IT Services](#) are always thinking about ways to help clients save time, money and become more productive so that they can focus on growing their business. Our clients are companies big and small, consultants and even non-profit organisations. We believe that it is best to automate processes that computer systems can handle, so that you can spend more time on core business. All the software products listed below, are developed with the above philosophy in mind. All these products are not just ideas but real working products. These products are waiting for someone with connections, resources and skills, to showcase, bring in investment and to take to the next level, with more features.

Note: Some of these products may not be available to try outside India because the SMS package, associated with them, is limited to India.

Task Management System: <https://fairtms.com/>

Any company with more than a handful of staff knows that assigning and keeping track of tasks is a tough job. If a task is not done as expected then, not only the staff member, but the manager also is at fault, for not following up. Ultimately, in case of delays, the client sees you in a bad light.

Fair TMS is used to assign tasks to staff. They receive an SMS when a task is assigned. Both the staff members and their respective managers get reminders for the target date. They see a dashboard with executive summary of open, in progress and closed tasks.

RSVP Tool: YepIm.In

For organized events, not knowing the number of attendees can cause food (and money) wastage. Also, sometimes attendees want to join but they simply forget about the event.

Use <https://yepim.in> to create an event and send the unique link to the people you wish to invite. Attendees can submit RSVP in the web app, accessed via this link. This web app shows a summary of attendees and also sends SMS and email reminders to attendees.

Society Visitor Management: <https://societysecurity.in/>

Visitors, sometimes falsely claim to visit a society resident for their personal agenda, be it theft or door to door marketing. To prevent this, the security personnel at the gate, will use the app to contact the resident, and verify the visitor's claim before allowing them entry. The residents will also get an SMS with the visitor's details. Moreover, these visitor records are maintained for audit purposes.

Society Issue Tracking: <http://issuetracker.societysecurity.in/login>

Residential societies experience problems that affect their members' lifestyle. These problems are reported by the residents but take time to be resolved. Even if some issues are resolved, timely and sufficient feedback to the residents is not made available. This application serves to ensure that the process of accepting issues and providing feedback on their status, is dealt with speedily and efficiently.

Note: This app could be extended for tracking issues for an organization or a community too.

Policy Reminders: <https://followups.fairshare.tech/>

Every insurance agent works hard to get as many policies under his belt as possible. While he is striving to get more policies, he also has to spend a significant amount of time, to remind existing policyholders about their payment due dates. This limits his ability to generate more business.

We have developed a web portal for automatically reminding the policyholders by SMS well before payment due dates. Also, these reminders come in handy to insurance agents in case he needs to manually remind his customers.

Note: This application has already been extended to various follow up scenarios like dental and pathology checkups, personal medicine and vendor maintenance contracts.

Online Visiting Card: [ZipVc](#)

Are you a fresher looking for a job, but worrying how to impress employers by your skills set? Or are you a businessman looking to expand your business, but have no time to prepare your business profile page for prospective clients? ZipVc Android app can create one page profile for you within a few minutes.

Another wonderful facility which ZipVC provides is a chance to earn money with it. You can also create profile pages for others: your relatives, friends, clients, etc, and earn money.

Still waiting for creating your profile? Use ZipVC app, *absolutely free*.

<https://play.google.com/store/apps/details?id=com.iquestionbanks.zipvc>

ZipVC could be incorporated as a card quickly in any website too, as shown in this example: <https://groups.zipvc.com/profiles/business-link-pune>

Multiple Choice Question Bank

We have a set of Android, iOS and Web apps with question banks from kindergarten to 10th. The contents are mostly for Science, Maths and languages (English, Japanese and Hindi).

Grand-daddy of all the objective questions:

<https://play.google.com/store/apps/details?id=tech.fairshare.mockexams>

Vedic Maths has more than 50,000 downloads so far:

<https://play.google.com/store/apps/details?id=com.iquestionbanks.vedicmath>

Another interesting app is:

<https://play.google.com/store/apps/details?id=com.iqitservices.flashcards>

Related webapps are: <https://24by7exams.com/> and <http://semienglish.com/>

Lead Generation Platform with Offers: <https://punefree.com/>

There is a high chance of conversion, once a potential customer tries your product or service for free, or at a discounted price. We have a platform to list such an offer. Customers can avail the offer by providing their mobile number with a few more details. Once a customer verifies his mobile number, service provider will get an SMS alert with the customer details. Service providers can also manage their leads via a dashboard.

Manage Invite-Only Groups: <https://groups.fairshare.tech/>

Managing closed groups has following features:

1. Inviting members by admin
2. Approving membership by admin
3. Membership profile managed by member (admin can create only initially but later member needs to edit)
4. Reminding about membership fees
5. Marking payments as done (not online payment).
6. Birthday wishes by Email.
7. Member list could be optionally made public.
8. If a member is part of another group then he will see both groups at the same time.

Bulk SMS: <https://miaalo.com/>

Bulk SMS remains one of the leading ways to promote businesses. We provide the platform to create groups and contacts and send SMS to those contacts.

Note: As an add-on, if you provide us a filter, and we will share contact databases from over 10 million entries!

Publish/Subscribe on Channels: <https://ilookouts.com/>

We used to publish notices for our class on a WhatsApp group but those messages used to get lost in other WhatsApp noise (like, "Good morning" messages). This one-way notification from iLookOuts helps in getting the attention. It used to take a lot of time to add members to our group now people manage their own subscriptions. Also, even unknown people subscribe once they get the link from someone else. Also, the biggest issue was, members used to see each other's number. iLookOuts takes care of these issues plus iLookOuts sends brief information about me to my subscribers so I get some free marketing done.

Bulk SMS from Android Phone

This is a very useful app having following features:

1. Export contacts to Google Sheet
2. Edit Google Sheet to separate contacts in Groups
3. Add sheets shared by others
4. Then import back into the app
5. Then you can SMS to any group
6. You can restore contacts to your phone that you copied via Google Sheet.

Note: This app is not available on Google Play Store due to multiple restrictions.

Important: Please be aware that business SMS is not allowed as per TRAI rules in India. So we suggest using different SIM card than your regular SIM.

Generate English Spelling Test from Any English Page

<https://play.google.com/store/apps/details?id=tech.fairshare.spellingtestgenerator>

This is an interesting app, which instantly creates a test, using a scan of any English printed page. It will speak out difficult words, which the user has to spell out. Difficulty level is decided by the user, by setting a minimum number of letters in a word. The application will then test the user with words with at least those many letters. User will be shown a score at the end of the test. **Note:** We have quite a few more ideas to enhance this app.

Attendance Apps

We have multiple variations of this app:

1. **For companies:** QR code based attendance that saves data to Google Sheet. This is useful for companies to record IN/OUT time for staff. <https://play.google.com/store/apps/details?id=tech.fairshare.AttendanceApp>
2. **For schools and colleges:** Students' and teachers' metadata is maintained in Google sheets. Also, attendance records are saved in Google Sheet. This saves a lot of server maintenance costs. <https://play.google.com/store/apps/details?id=tech.fairshare.presenty>
3. **Also for schools and colleges:** This is a full fledged web app with admin console and Android app for teachers. <https://play.google.com/store/apps/details?id=tech.fairshare.web.presenty>

Bahi Khata: Track Recovery Amount: <https://fairbahikhata.com>

Bahi-khata is a diary used by businesses to record day to day transactions like purchase and sales. However, this traditional bahikhata system requires manual calculations to find outstanding balance pending with customers and reminding customers to make payments towards this outstanding balance.

FairBahiKhata from Fairshare IT Services offers features to mitigate these issues, at the same time providing benefits to improve efficiency & effectiveness of your work. It has features like auto generated SMS for each performed transaction as well as for payment reminders. With just a single click, get all calculations done, and much more. There is also a feature to tag each purchase order for easy filtering later on. For example, in a Japanese class, students can be tagged by batch. Also, you can pull data by from date and to date, example, for a given financial year. The dashboard shows a summary of amounts pending.
